## **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohe et al. (EP 376682A1).

Ohe et al. discloses a holding fixture (2) (tube retainer) and a laser beam-irradiating portion (3) are provided on the distal end of an optical fiber (6) for focusing the beam. Holes (5) are formed in the tube using laser irradiation.

Ohe et al. does not teach the spray arm of a dishwasher.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use the tubing in a dishwasher or any device requiring a drilled tube as taught by Ohe et al. because it is merely an application of the device.

A recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Application/Control Number:

10/525,713 Art Unit: 1793

Claims 4 & 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong (USPN 4,420,005) in view of Ohe et al.

Armstrong discloses a dishwasher having rotatable spray arms. Holes are present in the spray arms (14). These holes are drilled in the arms.

Armstrong does not teach the type of drilling used to form the holes in the spray arms.

Ohe et al. discloses a holding fixture (2) (tube retainer) and a laser beam-irradiating portion (3) are provided on the distal end of an optical fiber (6) for focusing the beam. Holes (5) are formed in the tube using laser irradiation.

It would have been obvious to one of ordinary skill in the art at the time of the invention to use a laser to form holes, as taught by Ohe et al. in the Armstrong system because the holes can be very small which increases the water pressure and enhances the cleaning of the dishes.

The type of materials (blow molding plastic) chosen are a choice in design and substitutions of known equivalent structures may be made. In re Kuhle 188 USPQ (CCPA 1975), In re Ruff 118 USPQ 343 (CCPA 1958).

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Armstrong and Ohe et al., as stated above and further in view of Ota (USPN 6,034,349).

Armstrong and Ohe et al. do not disclose the shaping of the holes.

Ota discloses laser machining forming holes with desired shapes and sizes.

10/525,713 Art Unit: 1793

It would have been obvious to one of ordinary skill in the art at the time of the invention to form different shapes as taught by Ota in the Armstrong system because tailored holes can direct the water such that cleaning action of the dishwasher is optimized.

## Response to Arguments

Applicant's arguments filed 9/19/07 have been fully considered but they are not persuasive.

Applicant argues that a blow molded plastic is not taught. The examiner respectfully notes: The type of materials (blow molding plastic) chosen are a choice in design and substitutions of known equivalent structures may be made. In re Kuhle 188 USPQ (CCPA 1975), In re Ruff 118 USPQ 343 (CCPA 1958).

Applicant argues that Ohe et al. does not teach a device for forming holes (nozzles) in spray arms. The examiner respectfully disagrees because Ohe et al. does teach the formation of holes in a tube using a laser. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck* & Co., 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

Applicant argues that Armstrong does not teach the use of a laser to form holes. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are

based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA.1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986).

#### Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to M. Alexandra Elve whose telephone number is 571-272-1173. The examiner can normally be reached on 7:30-4:00 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jonathan Johnson can be reached on 571-272-1177. The fax phone

Application/Control Number:

10/525,713 Art Unit: 1793

number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

November 26, 2007.
